Purpose of Inspection:
This was a routine inspection.

Inspection Summary:

1. Permits, Revisions, Transfer, Bonds
The reclamation bond was escalated to 2005 dollars, so it is long overdue to be escalated. The surety is \$57,788.00 in two certificates of deposit.

8. Soils
The dominant vegetation on the soil stockpiles is still weeds.

10. Other
There is a truck scales that was not present at the time of the previous inspection and is not shown on the surface facilities map.

Other than the scales, the site has hardly changed since the last inspection about two years ago. It appears the operator is continuing to take material from product stockpiles; I could not tell that there had been any recent mining, and the site has not been expanded.

Conclusions and Recommendations:

The Division needs to examine the reclamation surety and bring it up to date.

I do not know whether the soil stockpiles have been seeded, but in any case, the operator should try again to establish vegetation on them.

The operator needs to submit an amendment showing the scales.
